

Children's Hospices Across Scotland

## Paediatric Palliative Care ECHO clinic

Join ECHO to help support the 15,949 children in Scotland with palliative care needs. Project ECHO (Extension for Community Healthcare Outcomes) helps health professionals reach more of these children in their community.

By using videoconferencing to conduct virtual meetings with multiple healthcare providers simultaneously, ECHO offers:

- outstanding learning opportunities for professional revalidation and CPD
- collaboration, support and ongoing learning with subject-matter experts
- innovative ways to support children in their homes and community
- improved communication links between professionals

and you will

- enhance your ability to extend palliative care for children
- acquire new skills and competencies
- have the opportunity to present de-identified cases for collaborative discussion and guidance

Project ECHO is a collaborative model of clinical education and care management that empowers professionals everywhere to provide better care to more children in their community.

For more than 20 years CHAS has been offering a full family support service for babies, children and young people with life-shortening conditions. This includes palliative care, family respite and support through our hospices, homecare services and hospital presence.
